

The Construction Recruitment Company (UK) Limited GDPR Policy

General Data Protection Regulation (GDPR)

The EU General Data Protection Regulation (GDPR) will replace the 1995 EU Data Protection Directive (European Directive 95/46/EC), with effect from 25th May 2018. The new regulation will strengthen and unify data protection for all individuals within the European Union and be enforced by the Information Commissioner's Office (ICO). We strive to provide our clients with a simple and effective job board platform, for posting jobs and searching CVs. This has earned us the trust of thousands of recruitment consultants and direct employers from across the UK. Our dedicated team are working hard to ensure The Construction Recruitment Company (UK) Ltd (CRC) is fully compliant with the new legislation without interruption to any of the services we offer. Personal data may be shared with a bank or finance provider.

Will GDPR affect how I use CRC's services?

No. We do not believe the changes we make to ensure we are compliant with GDPR will affect the services offered by The Construction Recruitment Company (UK) Ltd (CRC) to our clients. The new regulations will not affect your ability to post jobs with us, nor access our CV database, in line with our terms and conditions, which are kept up to date in line with all data protection regulations. Remember, GDPR is not being introduced to stop candidates from finding work. Handling candidate data and contacting candidates When candidates register with CRC, they are doing so to be contacted by recruiters and prospective employers about job opportunities. Therefore, as a business we can continue processing the data supplied by candidates who register with CRC, as it is in their, and our, legitimate interest to do so. Furthermore, we will continue to give our registered candidates control over their contact preference options, including the option to delete their account. When a candidate deletes their account via the website, we immediately remove their details and CV from the CV Database. All personally identifiable information (PII) is completely removed from our systems within 30 days. We will also provide a way for our clients to know of any candidates who have deleted their CV from our database, via the client login area. You are responsible for updating your own records to remain compliant.

How will CRC manage the right to erasure?

We will provide a way for you to keep up to date on any candidates that exercise their right to erasure from our database. You are then responsible for updating your own records to remain compliant. See 'Handling candidate data and contacting candidates' for more information.

How long does CRC keep data for?

Candidate data is held for as long as individuals keep their accounts and is deleted upon request. See 'Handling candidate data and contacting candidates' for more information.

Searching the CV Database

After GDPR comes into force, nothing will change in the way clients can search our CV Database. We will continue to give candidates control over the sharing of their personal data and give them the option to hide their CV so it cannot be searched for, or found, as part of the CV Database service.

Will you be making changes to any data protection agreements, including service agreements, due to GDPR?

Our Terms and Conditions will be updated to clarify the relationship between CRC and its clients, and the new terms will be available on www.theconstructionrecruitmentcompany.co.uk

Client responsibility

You are responsible for protecting the data you control and process under the new GDPR principles and we recommend that you familiarise yourself with the core principles to ensure you're compliant.

If a candidate deletes their details from CRC, what action is required by clients that have downloaded their details?

CRC will provide a section within your recruiter area listing any candidates you have downloaded that have deleted their accounts, to enable you to update your records.

In what geographic region is our data stored?

All of CRC's servers are in the UK. When we use cloud providers for a specific purpose, these servers are in the EU.

How does CRC keep its data secure?

We use industry best practice security including data encryption at rest, data transport using secure certificates, access controls and two factor authentication to protect against the unauthorised access of the data we hold.

What is the incident management process in the case of a data breach?

We have a full incident management process to investigate suspected or reported data breaches, which considers the requirements of GDPR, including the notification of the data subject and the Information Commissioner's Office (ICO).

For further information, or to discuss anything specific, please contact your consultant on 0800 470 4806.
